

The Art of the Human Experience... Meets the Future of Medicine

A unique practice based in cutting edge, unparalleled medical technologies

If you are searching for life extension, regeneration of your youthful glow and a renewed sense of satisfaction, look no further.

Put your faith in the field of regenerative medicine – through innovation and trusted physicians on the forefront of new options in patient care.

Enhanced by the skilled hands of an artist, a perfectionist, a legend.

As one of the nations most diversified, advanced and accomplished plastic surgeons, Dr. Lewis J. Obi continues to bring patients the most innovative techniques and technology in the world of plastic surgery and regenerative medicine. Unique among his peers in Jacksonville, he continually develops new techniques and treatments that enhance the progression of traditional plastic surgery. His patients experience less bruising, faster recovery times, and enjoy more natural, lasting results.

In contrast to other U.S providers of adult stem cell therapies, Dr. Lewis Obi has more than 30 years experience with the use of adult fat for his plastic surgery patients. He has insured safety and efficacy by establishing the first state and federally licensed plastics ambulatory surgery center (ASC) in the state of Florida more than 30 years ago, in fact one of the IRBs Dr. Obi independently generated (Advvara Cirbi IRB). The Pangenics team includes **Dr. Lewis Obi** - Plastic Surgery, **Dr. David Heekin** - Orthopedics, **Dr. Kenneth Eaddy** - Pain Management/Internist and **Dr. Orlando Florete** - Pain Management.

Always on the cutting-edge and the forefront of discovery for procedural excellence – delivering more options, better results, and a more polished look.

One of the Most Advanced Private Stem Cell Centers in the Nation

Through the process of producing millions of viable stem cells from the patient's own fat, we unlock the potential of these live cells – stem cells that work to reverse cellular damage stimulating a more rapid healing process through less invasive techniques. In many cases, the simultaneous integration of Platelet Rich Plasma (PRP) is derived from each patient's own blood and strategically injected in joints and tissues to enhance healing and recovery.

The Pangenics Regenerative Network team of physicians performs a variety of procedures and continues to report and document results. Reviewed by our Independent Review Board or IRB, the compiled database is then used to establish safety and efficacy of these therapies. Adult stem cell therapy is becoming recognized as a viable alternative to joint replacement and surgical intervention for arthritis, sports injuries and a host of other diseases. The use of stem cells and PRP in place of surgery greatly enhances safety and a more rapid recovery, both in regenerative medicine as well as plastic surgery.

The gold hands on display in Dr. Obi's office were generated in 14k gold by the late Dr. Clark Hoshall Jr.

INNOVATION through safety, **PRIVACY** throughout the entire process and **RESULTS** that deliver.

Plastic Surgery, Orthopedics & Sports Injuries, Pain Management & More all at the Lewis J. Obi Plastic Surgery Clinic
